

Enabling Bioinformatics
from Research to Reality

www.eaglegenomics.com

The Eagle Perspective

Enabling a world where cutting-edge bioinformatics solutions move seamlessly from research to reality.

Eagle Genomics Ltd is a next-generation consultancy, positioned at the interface between academia and industry for translational bioinformatics. Providing a unique blend of academic expertise and commercial insight, we specialise in data integration and visualisation.

Services Overview

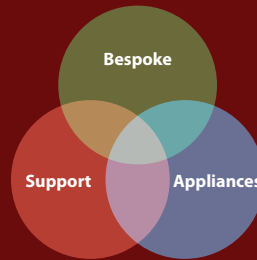

We understand why bioinformatics data and applications are business-critical components of many life-science-based enterprises.

Operationally, our capabilities are organised into three areas:

- Development of bespoke software solutions,
- Support and maintenance of third party bioinformatics platforms, and
- Supply of deployment-ready software appliances.

Based in Cambridge, UK, we work from the heart of the largest biocluster in Europe. We are in close proximity to several world-leading academic centres for bioinformatics research, such as the Wellcome Trust Sanger Institute and the European Bioinformatics Institute, where our consultants have built up many years of experience. Our customers range from SMEs to larger organisations from the pharmaceutical, biotechnology and agrochemical industries, and also the academic sector.

Contact us to discuss how we can help you.

Eagle Appliances

Genome-scale data in the public domain is vast, expanding and evolving with each advance in assay technology. These data are interrogated daily by numerous algorithms developed by thousands of scientists, providing unparalleled insights into the molecular organisation of life.

The Eagle perspective; seeing your data from a different angle.

Eagle Genomics develops platforms that provide analysts with the most convenient way to view their data in the context of the latest public genome annotations; Eagle Appliances are packages of leading data management and visualisation tools allied with tailored bioinformatics workflows. Our initial offering, the **Eagle Browser** is a VMware® virtual machine providing an Ensembl® development and integration platform at the click of a button.
